Appendix A

Technical Application

Mobile Unit Visits	10 visits	Mobile ultrasound to make 10 full-day visits available to pre-promotion and pre-referral ultrasounds in underserved counties.	By June 30, 2015

20. Program data collection will be collected by each collaborative organization but will be aggregated and reviewed by PHC program manager and case worker.

Each organization will use a similar client intake sheet to track individuals who visit their organization. The intake sheet will indicate what service(s) they need, their demographic information, and whether or not they have been served by the organization.

Organizations will submit monthly reports with details of their intake sheets and any program notes they wish to convey. PHC program manager and case worker will validate the reports and will compile the reports into a collaboration-wide synopsis so that all collaborative organizations can see what progress has been made and what best methods of implementation can be replicated.
